MONTHLY SUMMARY FOR SEPTEMBER 1999

Dry weather continued in western and southeastern Oklahoma through September, although statewide statistics, skewed upward by locally heavy rains in other areas, indicate near-normal rainfall for the month. The statewide-averaged monthly total precipitation of 3.96 inches is 0.09 inch greater than normal and ranks as the 36th greatest September precipitation total since 1892. The above normal precipitation was attained by precipitation averaging 30 to 35 percent greater than normal across north central and northeastern Oklahoma; this was counterbalanced by 50 to 70 percent of normal precipitation in southeastern and western regions of the state. Statewide total precipitation for the first nine months of 1999 is 31.91 inches, 4.82 inches greater than normal, the 18th greatest January-through-September precipitation of the 108 years on record.

The statewide-averaged temperature for the month was 70.7 degrees, 2.3 degrees less than normal, making this the 13th coolest September on record. Average temperatures for the month were lower than normal in all areas of the state, most notably in north central and northeastern sections. The year-to-date temperature for the state is 64.3 degrees, 0.7 degree greater than normal and 38th highest January-through-September on record in Oklahoma.

Early in the month, outdoor burning restrictions were placed on the southeastern two-thirds of Oklahoma, including a total ban on outside fires in the southeastern one-third of the state, in response to the sparseness of rainfall over the previous two months. Strong thunderstorms, extending from extreme south central Oklahoma through north central and northeastern portions of the state, on the 7th and the 10th led to a lifting of those restrictions in most areas on the 14th.

Isolated heavy thunderstorm activity prior to the 7th included a 3.23-inch rain at Spiro (LeFlore County). The Burbank (Osage) and Breckinridge (Garfield) Mesonet sites recorded 3.54 and 3.51 inches of rain, respectively, on the 7th. Mulhall (Logan) reported 3.02 inches by the morning of the 8th and rainfall amounts between two and three inches were commonplace in the northeastern quarter of the state. Local flooding was reported in Adair and Cherokee counties. Two-inch hail was reported at Nelagoney (Osage) and the Marshall Mesonet site (Logan) recorded 73 mile-per-hour winds, both on the 7th.

A line of very strong thunderstorms swept through south central, central, north central and northeastern Oklahoma on the 10th. Frequent lightning forced the suspension or cancellation of several Friday night high school football games in central Oklahoma. A weak tornado was confirmed near Ames (Major). Two-and-three-quarter-inch hail was reported east of Okemah (Okfuskee). The Chickasaw National Recreation Area (Murray) near Sulphur reported an overnight rainfall of 4.61 inches. The Mesonet site north of Tishomingo (Johnston) recorded 4.51 inches and Elmore City (Garvin) reported 4.40 inches. Additional rain over the weekend increased the three-day totals at Chickasaw NRA and Tishomingo to 7.01 and 7.00 inches, respectively. Weekend precipitation accumulations included: Ardmore Mesonet (Carter), 5.46 inches; Kingston (Marshall), 5.45 inches; Pontotoc (Johnston), 4.92 inches; and Burbank (Osage), 4.74 inches.

The first infusion of cold air into the state arrived on the 12th. The front touched off thunderstorms in the Panhandle. In Beaver County, Beaver was pelted with one-and-three-quarter-inch hailstones and the Mesonet sites at Slapout and Beaver recorded maximum winds of 82 and 78 miles per hour.

From the 13th through the end of the month, the state's weather settled into a pleasant autumn pattern. Rainfall was adequate over most of the state, but the western third and the extreme southeast were too dry. Kenton (Cimarron) experienced the state's first freezing temperature of the season on the 29th, reporting an overnight low of 29 degrees.

OKLAHOMA

EXPLANATION OF TABLES

Two kinds of tables appear in this summary. The first is a set of tables containing all reporting stations grouped by climate division. The figure above shows the locations of the climate divisions. Each table contains the following information for each station:

- Station Name:
- Station Identification Number: These are usually assigned by the National Climatic Data Center.
- Climate Division: See the figure above.
- Number of Temperature Observations: These are the actual number of temperature reports recorded at the station during the current month. Missing observations may result in artificially high or low mean monthly temperatures.
- Deviation from Normal: The deviation of the observed mean monthly temperature from the monthly station normal. A positive value indicates the month was warmer than normal. A negative value indicates the month was cooler than normal. Normal monthly temperatures may be calculated by subtracting the deviation from the observed temperature.
- Maximum Daily Maximum: The maximum daily maximum temperature observed during the current month and year and the day which it occurred.
- Minimum Daily Minimum: The minimum daily minimum temperature observed during the current month and year and the day which it occurred.
- Heating Degree Days: HDD are calculated each day of the month for which there is a temperature report and the average temperature for the day is less than 65 degrees. Daily values are summed to arrive at a monthly total. They are a qualitative measure of how much heat was required to maintain a comfortable indoor temperature. Missing observations may result in an artificially high or low value. For February 1984 HDD would be calculated as:

$$\sum_{i=1}^{29} 65 - ((TMAX_i + TMIN_i) / 2)$$

- Deviation from Normal Heating Degree Days: A positive value indicates higher than normal heating requirements for the month as a whole. A negative value indicates lower than normal heating requirements for the month as a whole. Normal HDD may be calculated by subtracting the deviation from observed HDD.
- Cooling Degree Days: CDD are calculated each day of the month for which there is a temperature report and the average temperature for the day exceeds 65 degrees. Daily values are summed to give a monthly total. They are a proxy measure of how much cooling was required to maintain a comfortable indoor temperature. Missing observations may result in an artificially high or low value. For June, CDD would be calculated as:

$$\sum_{i=1}^{30} ((TMAX_i + TMIN_i) / 2) - 65$$

Deviation from Normal Cooling Degree Days: A positive value indicates higher than normal cooling requirements for the month as a whole. A negative value indicates lower than normal cooling requirements for the month as a whole. Normal cooling degree days may be found by subtracting the deviation from the observed cooling degree days.

Total Precipitation: Often incorrectly referred to as mean precipitation, this value is the sum of all precipitation reported during the month at a station. If snow occurred, it is to be melted and its water equivalent recorded.

Number of Precipitation Observations: The number of days a rain or no-rain observation was reported. Missing observations frequently result in artificially low total precipitation values.

Deviation from Normal Precipitation: A positive value indicates more rain than normal was received. A negative value indicates less than was expected rainfall was received. Normal rainfall may be calculated by subtracting the deviation from monthly total.

Maximum 24-Hour Report and Day: The maximum amount of precipitation recorded during the station's 24-hour observation period for the current month and year and the day on which it was recorded.

The second set of tables contain similar information but are the average or extreme over all the stations reporting in each climate division.

OKLAHOMA CITY CLIMATE CALENDAR
DATA COURTESY OF NATIONAL WEATHER SERVICE NORMAN

The data on this calendar is for Oklahoma City.
Normal values are calculated for the period 1961-1990.
Temperature extremes are for the period 1891-1997.
Precipitation extremes are for the period 1891-1997.
